

What are the game controls used in Jewels of Anubis?

Sound Control - This allows the customer to increase or decrease the level of sounds in the game. The button on the right of the control mutes the sound altogether.

Odds Display - This allows the customer to select the format they wish to see the game odds displayed in. AS = Asian Decimals, UK = British Fractions, EU = European Decimals, and US = American Odds. Asian Decimals is your winnings as a decimal, British Fractions is your payout as a fraction, European Decimals is your payout as a decimal, and American Odds show how much money will be won on a \$100 wager.

Balance - The customer's balance is displayed near the top right of the game screen. The button immediately right of the amount hides/unhides the balance amount. When there are no active bets running, the button furthest right is enabled to allow balance refresh, to take into account bets placed on other website channels, voids and customer transactions such as deposits and withdrawals.

Bet ID - The current Bet ID is shown below at the bottom of the screen once cards have been purchased. When viewing your bet history, your games are displayed under their associated Slip ID. This is the Bet ID rounded down to the nearest 100. For example, if your Bet ID was 1234567891101, the relevant Slip ID would be 1234567891100.
