

What are the mobile game controls used in Ocean Fortune?

Mobile Controls

- **Buy Ticket** – Play a round (=spins the reels)

- **Reveal All** – Reveal all symbols

- **Auto-Bet** – Opens Auto-bet settings

- **Pay Table** – Opens the pay table pages

- **Home/Lobby** – Exit game to home/lobby of host

- **Settings** – Opens Settings page of the game

- **Bet** – Display the stake for the current round. When clicked, opens the bet value drop box.

A dark rectangular box with rounded corners containing the text "Bet: \$1,000" in a light gray font.

- **Balance** – Display player balance

A dark rectangular box containing the text "Balance: \$1,000,000" in a light gray font.

- **Win** – Display current round total win

A dark rectangular box containing the text "Win: \$1,000,000" in a light gray font.

- **Clock** – Display time of current player session

All game settings and info pages such as help and pay table are accessed by clicking the settings icon.

Setting Auto-Bet - Mobile

The player need to press the auto-bet floating icon, right above the spin icon, in order to enter the auto-bet settings page.

Auto-bet settings can also be reached through the game settings (Settings=>Auto-bet)

Schematic description of the setting elements:

Actual game settings:

Auto-Bets Limits:

- **Loss limit (numeric value)** - Pauses the auto bet function (see below) when the total loss of the user so far ($\text{SUM}(\text{bet}) - \text{SUM}(\text{win})$) $\geq$ (numeric value)
- **Single Win (numeric value)** - Pauses the auto bet function (see below) when a single win payout $\geq$ (numeric value) or more.

- **Win Limit (numeric value)** - Pauses the auto bet function (see below) when the total Win of the user so far ($\text{SUM}(\text{bet}) - \text{SUM}(\text{win})$) $\leq$ (numeric value)
- **Stop on win** - When any single round results with a win of any size, auto-bet deactivates. Free spins count as one round, so if a main ticket didn't win any line but did win free spins, and one of the free spins wins any amount, the round counts as a win.
- Each limit can be turned on or off by clicking on the onoff button next to it.
- To set the number of auto-bets rounds, the player picks the desired value from the top list of optional values by clicking on the desired value. The selection mark is set on the last settings.
- When a limit is reached and the Auto-bet stops, a message pops in the center of the screen reading according to the limit:
 - "LOSS LIMIT REACHED"
 - "WIN LIMIT REACHED"

- "WIN REACHED"
- "REACHED A WIN"

Message will fade out after 5 sec or on any tapping (screen or button pressed)

To exit the auto bet panel, the player can:

- Start the auto-bet rounds by clicking “**START**”.
- Exit auto-bet completely by clicking the “**return to game**” button on the right.

Auto-Bet Active View:

When the auto-bet is activated, the player is returned to the game view.

The spin button is replaced by a counter displaying the remaining auto-bet rounds. The auto-bet button is changed into “**Stop auto-bet**” icon.

Clicking on the “**Stop auto-bet**” or on the counter, stops the auto bet and returns to regular game mode.

Game Settings Page

- Setting Turbo mode - When Turbo mode is on, it speeds the game reels, enabling a faster game.
- Setting sound – Ambiance Sound – enabling or disabling background music.
- Setting sound –Sound effects – enabling or disabling sound effect.
- Full Screen – enabling or disabling Full screen mode.
